SH100

SH100 is a high performance pan and tilt head designed for portable broadcast cameras. The pan and tilt fluid drag controls make it easy to adjust the head from low to high torque, to provide the smooth, high quality movement needed for calm, clear camera work. Further, the cam/spring Perfect Counterbalance System eliminates any stress during tilts. The tilt fluid drag torque adjustment does not cause any change in balance, and makes this head extremely easy to use.

The SH100 has gone through a multitude of performance tests and brutal reliability testing to ensure that it meets the demands of the strictest pros in any type of shooting situation.

Designed as a multipurpose head, suitable for news, documentary, drama, and live sports, the SH100 is SHOTOKU's premier ENG/EFP pan and tilt head.

The SH100 has one sister model.
